DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a method of making a reference library with hybridization, classified in class 435, subclass 6.
 - II. Claims 7-10, drawn to a method of making a reference library with ligation, classified in class 435, subclass 91.52.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group II are unrelated and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as claimed have different method steps that have different functions, different effects, and modes of operation.

The method step of forming a first population of single stranded DNA fragment from a first subpopulation of restriction fragment of Group I is not required by the claims of Group II. The method step of ligating an Exo III resistant linker to the first cleavable ends of the first restriction fragments to form a first ligation product of Group II is not required by the claims of Group I.

3. Because these inventions are distinct for the reasons given above and the searches required are not co-extensive thus requiring a burdensome search, restriction for examination

Art Unit: 1639

purposes as indicated is proper. Additionally, different patentability considerations are involved for each group. For example, a patentability determination for Group I would involve a determination of the patentability of the method step of forming a first population of single stranded DNA fragment from a first subpopulation of restriction fragment while a patentability determination for Group II would involve a consideration of the patentability of the method step of ligating an Exo III resistant linker to the first cleavable ends of the first restriction fragments to form a first ligation product. These considerations are very different in nature.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to My-Chau T. Tran whose telephone number is 703-305-6999.
